

AI Innovation Platform

Release Notes v2.2.0

November-10-2025 to February-06-2026

This document records new features and bug fixes implemented between Nov 10, 2025 to Feb 06, 2026.

Features & Improvements:

Enhanced User Experience & Interface

- Dashboard:
 - Visual Differentiation for Tenants: Internal tenants are now visually differentiated when switching tenants from the tenant selector, making it easier to identify your current context.
 - Streamlined Dashboard View: The dashboard has been streamlined to primarily display the "My Projects" section. Modules such as the cart, assistants, and others are currently disabled and will not be visible.
- Single Sign-On (SSO) Integration:
 - Users can now directly log in to the platform using the "Sign in with Bayer" option, leveraging Bayer credentials through Single Sign-On.

My Tenant

- Internal Tenant Focus:
 - The platform is currently focused on internal tenants. All internal tenants will now be automatically marked as KYC verified by default.

License Management

- **Cost and Purchase Operations Decommissioned**

All cost-related operations and purchase functionalities, including the payment gateway, have been temporarily removed. This means:

- The streamlined subscription options (Basic, Advanced, Enterprise) and publisher add-ons are temporarily unavailable for purchase.
 - The transaction module for managing financial transactions and the transaction history tab are temporarily decommissioned.
 - Functionality for reducing seats and removing users when modifying license seats is temporarily unavailable.
 - All payment gateway related features, such as facilitating the purchase of Marketplace items and publisher payment integration, are temporarily unavailable.
- **Default License for Internal Tenants:**
 - All internal tenants will now automatically have an Enterprise license, and this license tier cannot be modified.

Project Management

- **Service Start/Stop Functionality:**

Users can now start and stop the following services within their projects, providing greater control over resource usage:

- Compute Engine
- Vertex AI Workbench
- Cloud SQL
- TPU
- JupyterHub
- MIS
- 3D Slicer
- ActiveLoop

- **Enhanced User Experience & Interface:**

- Visual Differentiation for Projects: Regular and regulated projects can now be easily distinguished within the user interface through visual cues, providing clearer identification of project types.
- Folder Renaming: Duplicate checks are no longer applied to case-sensitive names when renaming folders directly within the "My Projects" section.
- Hidden Folders Tab: The "Folders" tab is now hidden for users who do not have access to any folders, streamlining the interface for relevant users.

Marketplace Enhancements

- The Marketplace module and all its associated functionalities are temporarily decommissioned and unavailable.

Publishing Center

- The Publishing Center module and all its associated functionalities are temporarily decommissioned and unavailable.

Digital Assistant

- The Digital Assistant module and all its associated functionalities are temporarily decommissioned and unavailable.

Admin Management and Controls

- User Onboarding:
 - Only system admins can now onboard new tenants. The general user sign-up option is disabled.

Documentation Changes

- Documentation has been updated to reflect the changes implemented in this release, including the temporary decommissioning of certain modules and the new functionalities introduced.

Notes:

Features Coming for Next Release:

- A new User Management tab will be introduced for system admins, allowing them to view, search, and delete users across the platform.
- A new dark mode option will be implemented across all modules in the user interface, offering an alternative visual theme for enhanced user comfort and preference.

Bug Fixes

Description	Impact Analysis	Status
Audit Logs-User list in Users filter dropdown does not update when switching tenants and No logs found message displayed for any user filter selection.	Critical	Closed
An error message is displayed when the user tries to log in to the centralized ticketing tool using valid credentials.	Critical	Closed
Data is not available in the snapshot row for the cloud workstation	Critical	Closed
