

# AI Innovation Platform

Release Notes v2.3.0

February-09-2025 to March-13-2026

This document records new features and bug fixes implemented between Feb 09, 2026 to March 13, 2026.

## Features & Improvements:

### Enhanced User Experience & Interface

- Quick Tour Functionality:
  - Comprehensive quick tours have been added for the "Requests" tab and the "User Management" tab.
  - All existing modules have updated quick tours, taking into account the distinctions between internal and external tenants for a more tailored experience.

### My Tenant

- Internal Tenant Focus:
  - The platform is currently focused on internal tenants. All internal tenants will now be automatically marked as KYC verified by default.

### Project Management

- **Enhanced User Experience & Interface:**
  - Tree View for Folders and Projects: A new tree view has been implemented for folders and projects, providing a more organized and intuitive way for all users to navigate and manage their work.
  - Backend enhancements now include an automatic retry mechanism for project creation failures. This ensures that the system automatically reattempts and refreshes the creation process in the event of an initial issue.

### Publishing Center

- The ability to assign the publisher role has been disabled. This change reflects due to the decommissioning of the Marketplace and Publishing Center modules.

### Admin Management and Controls

- User Management Section:
  - A new User Management tab has been introduced, providing super admins with comprehensive capabilities to view, search, and delete users across the entire platform.

- External Tenant Creation Blocked:
  - Super administrators are now prevented from creating external tenants. This change aligns with the recent finalization of the internal tenant concept, meaning only internal tenants can now be onboarded to the platform.

## Documentation Changes

- Documentation has been updated to reflect all changes in this release, including the removal of cost and licensing features, module decommissioning, and new functionalities.

## Notes:

### Features Coming for Next Release:

- We are planning to enhance the user management feature to offer super admins the option to either delete a user from a specific tenant or from the platform altogether.
- A new dark mode option will be implemented across all modules in the user interface, offering an alternative visual theme for enhanced user comfort and preference.

## Bug Fixes

Description	Impact Analysis	Status
Unable to delete users from user management tab as a system admin	Critical	Closed
The submit button on the create projects page is still enabled even after selecting more than 15 regions in the region field and the user is able to submit the project	High	Closed
An html tag "--status-tag">" is being displayed on the tenant status and user status column whenever the user download a csv file and scrolls the page	High	Closed
Few of the decommissioned APIs are still being triggered upon switching the tenants	Medium	Closed
Disable the redirection to marketplace items and requests or appropriate alerts can be displayed	Medium	Closed

<b>Description</b>	<b>Impact Analysis</b>	<b>Status</b>
The upgrade license option can be disabled or removed from infra module during project creation/ project edit for regions	Medium	Closed
