

AI Innovation Platform

Release Notes v1.3.0

May-13-2025 to June-27-2025

This document records new features and bug fixes implemented between May 13, 2025, and June 27, 2025.

Features:

- Enhanced User Experience & Interface:
 - Modern Error Messages: Error messages now feature a modern snackbar design, enhancing the visual experience and providing clearer feedback.
 - Standardised Interface: The interface has been standardised with sentence casing conventions for improved readability.
 - The "Pending tasks" section has been added as a part of the My Org page for customer admins.
 - The "Requests" section has been added to the profile options for super admins and users.
- My Organization:
 - We've redesigned the dashboard with new pages for the "My Organization" sections, providing a more intuitive and user-friendly experience.
 - Multi-Organization Support: Users with multiple role assignments can now easily manage their access across different organizations.
 - The organization has introduced a new transaction module, which manages financial transactions and offers three license tiers: **Free, Enhanced, and Premium**. This streamlined license management system allows customers to easily select and update their subscription level based on their needs, improving operational efficiency and providing flexible options for all users.
- License Management:
 - The new license flow feature streamlines how customers select, purchase, and manage their subscription options (Free, Enhanced, and Premium tiers).
 - Transactions & Invoices Tab: A new "Transactions & Invoices" tab has been added to the license management UI, providing easy access to your transaction history.
- User Management:
 - New functionality added to view and add users within the user management system.
- Project Management:
 - Streamlined Project Workflow: Users can now create projects directly from the "Projects" tab with significantly reduced creation time due to improved system settings, while benefiting from platform-wide improvements to the project hierarchy.
 - Project Services Enhancements:
 - Project Services functionality now allows users to group and pin services for easier access.

- A new user interface for service backup has been implemented, which supports individuals who work with multiple organizations to backup their services.
- The organization has upgraded its platform with an improved user interface that displays backup status and provides streamlined management of service and project backups. This enhancement offers customers greater visibility and control.
- Marketplace Enhancements:
 - Enhanced Marketplace Functionality:
 - Functionality for user status changes and information updates is now available.
 - Integrated Transaction Module: The transaction module is now integrated with Marketplace functionality.
 - Order History: View your past orders under "Order History" in the shopping cart.
 - Item Resource Files Viewing: Easily view resources within the Item details page.
 - Marketplace UI Improvements;
 - We've updated the Marketplace layout by removing the sliding image display (carousel) and redesigning the "New Arrivals" section for a simpler experience.
 - Each search on the Marketplace landing page will now be limited to displaying 4 items for better visibility.
 - Image stretching issues on item detail pages have been fixed.
 - We've redesigned the dashboard with new pages for the "Publishing Center" sections, providing a more intuitive and user-friendly experience.
- Publisher:
 - Publisher profile management and artifact publishing capabilities have been added.
 - Publisher dashboard is integrated with comprehensive analytics for all published items, enabling streamlined management and performance tracking in one convenient location.
- Digital Assistant:
 - Digital Assistant Feature: The full version of the Digital Assistant feature has been deployed, which includes an advanced document creation assistant that helps users draft various types of documents more efficiently.
 - Upgraded Gemini Model: The Digital Assistant now uses the newer 'text-embedding-005' version of the Gemini model for improved performance.
 - Ambient Assistant: Ambient assistant functionality is now available across all modules, featuring static prompts that include conversation, regeneration, and editing capabilities.
- Support & Ticketing:
 - Improved UI/Workflow: The updated support portal features a simplified interface with clear ticket status tracking, faster request submission, and improved communication between customers and support staff.
 - Attachment Viewing: You can now view attachments within the support and ticketing platform.
- Documentation Changes:

- Updated documentation to include June release features such as the publishing centre, my organisation page, project backup, cloud cost breakdown visibility, and the revised roles and responsibilities matrix.
- Restructured the documentation to align with the latest updates.

- **Bug Fixes**

Description	Impact Analysis	Status
The user is getting logged off after clicking the help and support icon.	Critical	Closed
The Order History tab in the shopping cart is empty even after purchase approvals.	Critical	Closed
